

How to get rid of "Highlight" context menu item in PDFView?

I'm using PDFKit to render a PDF and I have added custom menus using "UIMenuController". But it is now deprecated from iOS 16 onwards.

I remove share、loopup menu items with code below:

```
@available(iOS 13.0, *)
open override func buildMenu(with builder: UIMenuBuilder) {
    builder.remove(menu: .lookup)
    builder.remove(menu: .share)
    builder.remove(menu: .replace)
    super.buildMenu(with: builder)
}
```

But the "Highlight" context menu can't be removed when a user long press to select text in a PDF. There is no way to get rid of this menu item ? And how to use UIMenuInteraction in PDFView ?

Any help would be really appreciated.
